Powering the Possibilities

MILLER TECHNOLOGY SERVICES ABOUT US

Founded in 1928, Miller Electric Company has grown from a local electrical contractor to a national company licensed in nearly all 50 states. With over 1,900 employees, we provide a diversified range of services to a vast number of markets. We have worked hard to preserve our founder's principles of quality and customer service while expanding our reach and capabilities.

Over our 92-year history, we have acquired a unique and immense collection of skills that allow us to tackle any project no matter the scale. For this reason, we are uniquely qualified to help usher in the mass adoption of Electric Vehicles. At Miller Electric Company, we have the capabilities to be your partner in this nationwide sustainability transformation – not only helping you construct and manage your EV infrastructure but also helping you leverage the increased connectedness to drive performance.

In today's rapidly changing environment, we remain grounded in our core values and committed to our mission. We are committed to bringing you quality and innovation at every turn. We are in the business of powering the possibilities of a more connected future. Let us bring those possibilities to you.

Powering the Possibilities

COMMERCIAL/PUBLIC EV CHARGING STATIONS

Going green is not just an innovative way for companies to improve their bottom line, its the best way for them to help solve the most pressing issue of our time. This is how we approach this issue. With mass-adoption of EVs just around the corner, we consider it our duty to do our part in this transformation of travel.

Our teams have years of experience installing all levels of charging stations and the corresponding infrastructure for a wide variety of commercial and public entities. Our list of clients includes auto dealerships, office and retail spaces, municipalities, and even the Everglades National Park.

In addition, our prefabrication teams allow us to complete projects of any size with exceptional speed and precision.

EV FLEETS AND PUBLIC TRANSPORTATION

Electric fleets are a critical part of sustainable energy; even a small fleet of electric vehicles can eliminate millions of pounds of carbon emissions. Over time, EV fleets also save companies, governments, and educational institutions tens of millions of dollars in fuel and upkeep costs.

We have the capability and experience required to speed up the mass-adoption of electric fleets. Our teams have provided EV charging stations and infrastructure for various educational institutions and local governments.

SERVICE & MAINTENANCE

Our crews work around the clock delivering service and preventive maintenance to a large number of industries. We are proud to add yet another industry to that list: EV Charging Stations & Infrastructure.

From cleaning and routine service, to preventative maintenance and complete system upgrades, we have the skills, experience, and national footprint to make sure that your EV fleet infrastructure is always functioning at maximum capacity.
